Mr. Adalberto Bosque, PhD, MBA  
Remedial Project Manager  
U.S. Environmental Protection Agency  
City View Plaza II Suite 7000  
48 RD, 165 Km.1.2  
Guaynabo, Puerto Rico 00968-8069

Re: San Germán Groundwater Contamination Superfund Site (OU-1)

Dear Mr. Bosque:

The additional comments contained in this letter are submitted to the United States Environmental Protection Agency ("EPA"), on behalf of CCL Label (San Germán), Inc., ("CCL"), regarding the Superfund Program Proposed Plan (the "Plan") for the San Germán Groundwater Contamination Superfund Site (OU-1) (the "Site"). These comments supplement our comments letter submitted to the EPA on the original comment period deadline, September 11, 2015. EPA extended said period until October 24, 2015. We appreciate the opportunity provided by your agency to submit these additional comments to the Plan and other related documents.

As previously stated in our initial comments, CCL currently leases a property owned by the Puerto Rico Industrial Development Company ("PRIDCO") at el Retiro Ward in San Germán, Puerto Rico. The property is identified by PRIDCO in its real estate records and in the lease agreement with CCL as Project No. S-0551-0-60 & Ext., (the "Property"). EPA states in the Plan and in other documents in the Administrative Record that the Property is one of two sources of contamination of the Site. The other source that EPA identifies is another PRIDCO property identified in PRIDCO's real estate records as Project T-0343-0-56 and T-0261, currently leased by Wallace Silversmith de Puerto Rico Ltd., (the "Other Property").

EPA also states in the Plan that it identified five volatile organic compounds or contaminants related to the Site. These contaminants of concern ("COC") are: (i) PCE; (ii) TCE; (iii) cis-1,2-DCE; (iv) 1,1-DCE; and (v) Vinyl Chloride.

As stated in its previous letter, CCL does not use any of these substances in its operations.

CCL also stated in its preceding letter and directed EPA to documents in the Administrative Record in support of its arguments that: (i) there was a documented pre-existing condition at the Property indicating the presence of the COC prior to CCL and any other inserts printing tenant occupying the Property; (ii) the wastes generated by the inserts printing companies at the time it occupied the property were non-hazardous and non-detect for the COC; and (iii) as of this date and after reviewing PRIDCO's files, there is no documented use or storage of any of the COC at the Property by any of its former tenants.

Notwithstanding the documented pre-existing condition at the Property and the lack of documentation evidencing the use of the COC at it, CCL respectfully understands and reaffirms that there is not enough information in the Administrative Record for EPA to make a determination that the Property is one of the two sources of contamination of the Site. CCL understands based on the Administrative Record and other documents reviewed, that the presence of the COC at the Property might be the result of migration and/or degradation of these substances from neighboring properties within the industrial park.

CCL has further reviewed the Plan and the following documents and data base: (i) Final Remedial Investigation Report (the "Report"); (ii) PRIDCO's letter of July 9, 2015 in response to EPA's Notice of Potential Liability and Information Request Letter to PRIDCO of May 19, 2015 ("PRIDCO'S Response"), as well as other documents in the Administrative Record of the Site; and (iii) The Right to Know Network, which obtains its information from EPA's RCRAINFO data base. Based on its supplementary review, CCL respectfully submits the additional comments below:

1. According to section 4.2.2.3 of the Report, EPA took 43 groundwater samples at 37 locations along 11 transects at the Site. Samples from transects T0-2 and T0-3 showed detection of TCE (2.53J, 1.32J) respectively, and cis-1,2-DCE (0.76J, 2.01J) respectively, below the EPA's screening criteria of 5 ug/L for TCE and 70 for cis-1,2-DCE. These transects are up gradient of the Property and were installed at the PRIDCO lot immediately adjacent to the eastern boundary of the Property. See Figure 4-6 of the Report. The lot where these transects were installed is identified as Lot 10 in PRIDCO's map of the Retiro Industrial Park ("Lot 10"). See Annex 1 of PRIDCO's Response. Upon information and belief, Lot 10 and lots 8-2, 9 and 11, are currently occupied by a General Electric company. According to PRIDCO's map of the industrial park, there are

buildings on lots 8-2, 9 and 11. Lot 10 appears to be used as an employee parking area for lots 8-2, 9 and 11.

2. Documents obtained from The Right to Know Network data base for the Retiro Industrial Park revealed RCRA violations by GE Industrial of PR LLC ("GE") and Pace Analytical del Caribe Inc., ("Pace"). See Exhibits 1 and 2 of this letter. Pace occupies lot 8-1 of the Retiro Industrial Park. The reports obtained provide no details regarding the facts, nature or description of the violations. The report relative to GE does not identify the lot or lots where the alleged violation occurred, other than its address at the Retiro Industrial Park. However, it appears from the report, that GE generated F001 RCRA waste, which includes the following spent halogenated solvents used in degreasing: tetrachloroethylene, trichloroethylene, methylene chloride, 1,1,1-trichloroethane, carbon tetrachloride and chlorinated fluorocarbons, among others. See Exhibit 1 of this letter.
3. Catch Basin samples were taken at the eastern side of the Property at points CB-1, CB-2 and CB-3. See Figure 4-11 of the Report. It must be noted that at CB-1 location, two storm water pipes coming from higher areas of the industrial park located South and South-east of the Property connect into the storm water system at the Property and continues to run North-northwest towards the small creek located North of the Property. CB-1 is the southern-most located and up gradient catch basin at the Property. Any substance that might come from neighboring properties through the storm water system will first enter through CB-1. The highest concentration of TCE from catch basin samples at the Property was found at CB-1, where storm water pipes from up gradient areas of the industrial park converge. CB-2 and CB-3, which are down gradient, had lower concentrations of TCE. It is evident that TCE at CB-1 is likely coming from an off-site source and not from the Property. Based on field observation, we cannot discard the possibility that other stormwater pipes from up gradient property connect at CB-3. The Report does not take into consideration the fact that storm water from off-site the Property comes into the Property and through it towards the small creek. There were no background catch basin samples taken anywhere nor samples taken at the catch basins located up gradient on B Street of the industrial park in front of lots 11 and 9. CCL respectfully believes that such background or catch basin samples in front of lots 11 and 9 should have been taken.
4. Further to our comments in the previous letter, it is important to mention that the Sub-slab Soil Gas and Indoor Air Sampling results at the former Baytex lot, down gradient from the Property, exhibited concentrations of TCE and PCE in orders of magnitude higher than those detected at the Property. Therefore, it seems obvious that the presence of these substances at the former Baytex lot is either the result of releases at that lot or as a result from migration of substances from other neighboring properties, but not from the Property.

Notwithstanding the fact that the transect results T0-2 and T0-3 at Lot 10 were below the screening criteria, the results showed the presence of COC at those points which are up gradient from the Property. It is evident that the COC from those samples must have come from a potential source at that lot or at a higher lot, but not from the Property. Furthermore, the Right to Know reports, based on EPA's RCRAINFO data base, document RCRA violations at lots up gradient from the Property and it appears that at least in one of those lots, TCE and PCE was handled. Therefore, CCL respectfully believes that EPA should have conducted additional sampling and studies at properties up gradient of the Property. Transect samples at Lot 10, where it appears that no current manufacturing activities are conducted, should not be relied upon to discard additional sampling or potential additional sources in other areas of the industrial park up gradient of the Property. CCL also understands that the catch basin sample at CB-1 might be reflecting the presence of TCE from neighboring properties or other higher elevation sources and not from conditions at the Property. CCL also believes that EPA should have taken background samples or additional samples in the small creek up stream, or before the discharge point of the storm water system. Furthermore, as stated in its prior comments letter, CCL believes that EPA should have taken subsurface soil and groundwater samples in B Street between the Other Property and the Property in order to provide better technical data to determine potential sources and groundwater flow in the area.

Based on all of the foregoing and in its comments previously submitted, CCL respectfully reaffirms and understands that: (i) any presence of the COC related to the EPA's Site investigation found at the Property is pre-existing to CCL and to any of the insert printing companies' leases; (ii) the wastes generated by the printing industries at the time of leasing the Property were not hazardous and non-detect for the COC; (iii) EPA cannot name the Property as a source of contamination without discarding the possibility that the presence of these COC at the Property might have been caused by degradation and/or migration from other neighboring properties in the industrial park.

Sincerely,

Jorge J. García-Díaz

## Waste Codes ?

Waste Type

D000HQ: DESCRIPTION

D001HQ: IGNITABLE WASTE

D002HQ: CORROSIVE WASTE

D003HQ: REACTIVE WASTE

P022HQ: CARBON DISULFIDE

P048HQ: 2,4-DINITROPHENOL (OR) PHENOL, 2,4-DINITRO-

P106HQ: SODIUM CYANIDE (OR) SODIUM CYANIDE NA(CN)

P119HQ: AMMONIUM VANADATE (OR) VANADIC ACID, AMMONIUM SALT

U002HQ: 2-PROPANONE (I) (OR) ACETONE (I)

U012HQ: ANILINE (I,T) (OR) BENZENAMINE (I,T)

U044HQ: CHLOROFORM (OR) METHANE, TRICHLORO-

U057HQ: CYCLOHEXANONE (I)

U112HQ: ACETIC ACID, ETHYL ESTER (I) (OR) ETHYL ACETATE (I)

U117HQ: ETHANE, 1,1'-OXYBIS-(I) (OR) ETHYL ETHER (I)

U121HQ: METHANE, TRICHLOROFLUORO- (OR) TRICHLOROMONOFUOROMETHANE

U133HQ: HYDRAZINE (R,T)

U151HQ: MERCURY

U154HQ: METHANOL (I) (OR) METHYL ALCOHOL (I)

U159HQ: 2-BUTANONE (I,T) (OR) METHYL ETHYL KETONE (MEK) (I,T)

U188HQ: PHENOL

U196HQ: PYRIDINE

U211HQ: CARBON TETRACHLORIDE (OR) METHANE, TETRACHLORO-

U213HQ: FURAN, TETRAHYDRO-(I) (OR) TETRAHYDROFURAN (I)

U220HQ: BENZENE, METHYL- (OR) TOLUENE

U239HQ: BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)
